24v inverter appears e01

Overview

What does E01 mean on a solar charge controller?

E01 on a solar charge controller indicates that the battery is in low voltage. This error code is common to both MPPT and PWM controllers.

What does error E01 mean?

Error E01 (battery over-discharged). My inverter's cut off is 50v, with a reboot at 51v. I had assumed 50v meant ~14% remaining. Could both of these things be caused by imbalanced batteries?

.

What does e1-8 e2-3 mean on an inverter?

E1-8: Instantaneous Undervoltage (Grid) E2-1: Overvoltage (DC) E2-3: Earth Leakage Disconnect the AC connection of the inverter by opening the AC switch. Check the AC junction box and system wiring. Remove the obstacle SAFELY. Reconnect the AC connection and check the inverter status. If the problem persists, contact the retailer or installer.

What does e1-1 mean on an AC inverter?

E1-0: Grid Absence Ensure the AC switch is closed. Operation will automatically restart when grid voltage returns to normal. Check AC wiring. If the problem persists, contact the retailer or the installer. Ensure the AC switch is closed. Check AC wiring. If the problem persists, replace the inverter. E1-1: Overvoltage (Grid).

What is error code E02 on solar charge controller?

E02 is a common fault code on solar charge controllers. The error message indicates a problem with the load. To fix it, reconnect or replace the load.

What is error E02 (battery over voltage)?

Error E02 (battery over voltage) has occurred during peak sun. Solved temporarily by adding load. The LI profile has boost/equalize and float charge voltages of 57.2V. Should I make a user defined profile and lower the voltage until I see the problem stop?

Error E01 (battery over-discharged). My inverter's cut off is 50v, with a reboot at 51v.
