

## SolarInvert Energy Solutions

# 4kw photovoltaic panel price

## Overview

---

On average, a 4 kW solar panel system costs \$11,200, according to real-world quotes on the EnergySage Marketplace from 2025 data. How much does a 4KW solar panel cost?

How much does a 4kW solar panel system cost?

A 4kW solar panel system costs around £9,500 to buy and install. If you want to include a battery in the installation, this will add around £2,000 to the price, for an overall cost of £11,500.

How many solar panels are in a 4KW system?

The number of solar panels in a 4kW system depends on the size of the panels themselves. If you have a 400W panel, it will produce 400 watt-hours in standard test conditions, which includes a cell temperature of 25°C and solar irradiance of 1,000W per m<sup>2</sup>, and is how every company checks a solar panel's capabilities.

What are the benefits of a 4KW Solar System?

One of the most significant advantages of installing a 4kW solar system is the potential for savings on electricity bills. On average, homeowners can save up to \$1,241 per year by harnessing solar energy. Over the expected lifetime of the solar panels, which is typically 25 years, the total savings can amount to an impressive \$31,025.

Can you build a 4KW Solar System?

You can build a 4kW system by purchasing solar panels with peak output ratings that add up to 4,000 watts (W). This doesn't mean your system will automatically produce 4,000kWh, as solar panel output depends on factors like your location, roof angle and direction, and the quality of the gear.

How much battery do I need for a 4KW solar panel?

You should usually add a 5-6kWh battery to a 4kW solar panel system. This will allow you to store your excess solar energy all year round, to use on cloudy days and after the sun goes down.

Can a 4KW Solar System be sold back to the grid?

Any excess solar energy generated by the 4kW system that is not used can be sold back to the grid. This means that homeowners can earn money for the extra electricity their solar system produces. With the current electricity costs, it is possible to achieve a 20% return on investment per year based on the panels' cost.
