

SolarInvert Energy Solutions

Add a set of energy storage batteries to the RV

Overview

Should I upgrade my RV battery & Solar System?

Upgrading your RV's battery and solar system is a game-changer for off-grid living. Understand your power needs, invest in lithium batteries, expand your solar panels, upgrade to an efficient inverter/charger system and consider dual systems for optimal efficiency. Remember: measure twice, install once.

What is an RV battery system?

Your RV battery system is a critical component of your rig's inner workings. It powers certain parts of the RV when you aren't hooked up to shore power, and can even be used to run every electrical appliance in your rig if you have the right setup.

How do I Keep my RV battery charged?

One solution to keeping your battery charged is to keep it plugged in and never let it dip below 50%. If a place to charge the RV battery is available, such as at home or while at a campsite, there is no harm in keeping it plugged in so that the battery does not dip below 12.5 volts and begin to sulfate.

Should you upgrade your RV batteries to lithium-ion?

Upgrading your RV batteries from traditional lead-acid batteries to lithium-ion ones is becoming increasingly popular among the camping community. But there's one crucial aspect you need to consider before making this leap – and that's getting a converter for your new battery system.

How do you connect RV batteries?

A jumper wire is used to connect RV batteries. The negative terminal of one battery is connected to the positive terminal of the other battery. Another set of cables connects the remaining positive and negative terminal to whatever you are connecting the batteries to. Connected batteries should have the same voltage and amp rating.

How do RV batteries work?

From the factory, a typical RV comes set up in such a way that the battery will run the rig's DC electrical system. This system includes the slides, furnace, lights, and vent fans, and provides the power needed to ignite the flames to run the water heater and refrigerator in propane mode.
