

## SolarInvert Energy Solutions

# Analysis of the current status of domestic battery cabinet industry

## Overview

---

Is the battery industry entering a new phase of development?

After years of investments, global battery manufacturing capacity reached 3 TWh in 2024, and the next five years could see another tripling of production capacity if all announced projects are built. These trends point to a battery industry entering a new phase of its development.

How is the global battery market advancing?

The global battery market is advancing rapidly as demand rises sharply and prices continue to decline. In 2024, as electric car sales rose by 25% to 17 million, annual battery demand surpassed 1 terawatt-hour (TWh) – a historic milestone.

How has domestic competition shaped the Chinese battery market?

Fierce domestic competition has shaped the Chinese battery market, which is home to almost 100 producers. To maintain or gain market share, these firms have been cutting their profit margins to sell batteries at lower prices. However, price declines could slow in the near future.

Which countries are leading the global battery industry?

Despite China's current market dominance, the expansion of battery production is also moving fast elsewhere. Korea and Japan are already major players in the global battery industry, home to key battery makers and specialised suppliers with strong expertise in NMC batteries.

Why are Korean batteries losing a quarter of Europe's market share?

Over the past two years, Korean manufacturers – traditionally the largest battery manufacturers in Europe – have lost almost one quarter of their market share in the European Union, which dropped from nearly 80% in 2022 to 60% in 2024 in part due to the increased success of LFP batteries made in China.

## Why are battery production plans cancelled in Europe?

Many battery producers in Europe are postponing or cancelling expansion plans because of uncertainty about future profitability. Production costs in the region are about 50% higher than in China; meanwhile, the battery supply chain ecosystem is still relatively weak and a lack of specialised workers persists.
