# Are home solar lights useful in winter

## Overview

---

Do solar lights work in winter?

The winter months normally bring dirty wind and rain along with them, and this can often affect how well your solar lights work in winter. After all, a solar panel covered in rain and mud won't be able to absorb as much sunlight as a clean solar panel. As covering the panel obviously isn't an option, your best bet is to keep the solar panel clean.

Do solar lights work in the summer?

And although they still struggle on particularly dark winter days, they always work for at least a few hours. If you have a south-facing garden, however, you may find that your solar lights still work fairly well in the summer. But it's still worth checking out the sun's movement to ensure the panel is exposed to as much sunlight as possible.

Do solar lights need a better battery for winter use?

And while all batteries lose their ability to hold as much charge when the temperatures drop and they're exposed to harsher weather conditions, low-quality batteries struggle the most. Because of this, it might be worth choosing solar lights with a better battery for winter use.

Do solar lights work in the Cold?

Use li-on batteries All solar lights use rechargeable batteries, and one of the drawbacks of these batteries is that they don't work as well in the cold. The colder the temperature, the greater the battery's internal resistance, which means the battery holds less charge and takes longer to build up even this lower charge.

How does winter affect solar panels?

Winter days are shorter, which means less time for solar panels to capture energy. Additionally, the sun's position in the sky is lower during winter

months, resulting in a less direct angle of sunlight hitting the solar panels. This can lead to decreased energy production and potentially shorter operating times for solar lights.

Can solar lights be used outside?

Some people use decorative solar lights outdoors during the year, but these are not recommended for winter. Solar lights with no outdoor usage rating might get damaged or can even freeze during the coldest day of the year.
