Overview

Can countries expand their wind energy supply chain?

Countries like Australia, Vietnam, South Korea, and Japan have the potential to expand their wind energy supply chain, but they face challenges such as inconsistent policies, limited investment in large-scale infrastructure, and restrictive local content requirements.

Does India have a diversified wind supply chain?

While India also plays a key role in the onshore wind supply chain, the region as a whole still lacks a diversified supply base. Countries like Vietnam and Indonesia have industries that could transition to wind energy manufacturing, such as shipbuilding, automotive, and electrical component production.

Can energy storage solve intermittency challenges?

The growth in installed and planned renewable energy generation capacity has driven developers and utilities to evaluate energy storage as a potential solution to intermittency challenges for grid operation and stability and provided investors with increasingly attractive opportunities and projects.

Which countries are preparing for energy storage deployment?

Market dynamics, technical developments and regulatory policies that could be decisive for energy storage deployment in Australia, Mainland China, Malaysia, Singapore, South Korea, Taiwan, Thailand and Vietnam. This white paper explores the opportunities, challenges and business cases.

How can APAC strengthen its wind energy supply chain?

APAC must strengthen its wind energy supply chain through regional cooperation, investment, and standardization to meet 2030 renewable energy targets.

Is wind energy a problem in APAC?

The region already accounts for 51% of the world's total wind power installations as of 2023, and this is expected to rise to 61% by 2030. However, despite this growth, the supply chain remains highly concentrated in China and India, creating potential risks and bottlenecks for the expansion of wind energy in other APAC countries.

Asia Wind Energy Storage Requirements

Storage in the energy transition in Asia-Pacific , PFI

Apr 10, 2024 · As Asia gears up for a shift to renewable energy, energy storage has come to the fore. But the transition to cleaner power can be a bumpy ride. To navigate the uncertain ...
