## Overview

---

How much does a microinverter cost?

Microinverters typically cost a couple of hundred dollars per unit. While they offer many advantages, which we will cover further, microinverters are notably costlier than string inverters when installed on an entire solar power system. Check out this video from Enphase to learn more about microinverters and their benefits.

What are solar microinverters?

Microinverters are small electronic devices that convert direct current (DC) into alternating current (AC). One microinverter could fit the palm of your hand. The main factor differentiating microinverters from traditional inverters is that they operate at the panel level rather than the solar panel system as a whole.

What are the most popular microinverters available in Australia?

Below is our detailed comparison of the most popular microinverters available in the Australian, European, Asian and US markets. Enphase Energy and APsystems are the most well-known microinverter manufacturers, while ZJBeny, Hoymiles & ZJ Beny recently entered the increasingly competitive market.

Which microinverter companies have opened up in the US?

Over the years, a number of microinverter companies have opened up in the U.S. The market, however, is dominated by the Enphase IQ series. APsystems currently claims the spot for the second largest supplier of microinverters worldwide.

What is a micro inverter?

Micro inverters contrast with conventional string and central solar inverters, in which a single inverter is connected to multiple solar panels. The output from

several micro inverters can be combined and often fed to the electrical grid.

Which microinverters are available in 2024?

The latest models added in 2024 are the new 3-phase IQ8-3P series from Enphase, the new SAJ M2 Series, and the NEO 2000M-X quad micro from Growatt. Since many of these microinverters have just become available, please provide any professional feedback here. Other inverter comparison charts:
