Battery calculation for mobile base station equipment

Overview

How do I choose a base station?

Key Factors: Power Consumption: Determine the base station’s load (in watts). Backup Duration: Identify the required backup time (hours). Battery Voltage: Select the correct voltage based on system design. Efficiency & Discharge Rate: Consider battery efficiency and discharge characteristics.

How do you calculate battery capacity?

Formula: Capacity (Ah)=Power (W)×Backup Hours (h)/Battery Voltage (V) Example: If a base station consumes 500W and needs 4 hours of backup at 48V, the required capacity is: 500W×4h/48V=41.67Ah Choosing a battery with a slightly higher capacity ensures reliability under real-world conditions.

How does a battery group work in a base station?

The equipment in base stations is usually supported by the utility grid, where the battery group is installed as the backup power. In case that the utility grid interrupts, the battery discharges to support the communication switching equipment during the period of the power outage.

How many battery groups are in a mobile network base station?

Fig. 1a shows two lead-acid battery groups in a mobile network base station and each battery group contains 24 cell batteries (the rated voltage of each battery cell is 2v). The rated capacity of a battery group is usually 500 AH and it can support about 10-12 hours (i.e., the reserve time of a battery group is 10-12 hours).

Why do cellular communication base stations need a battery alloc?

Current cellular communication base stations are facing serious problems due to the mismatch between the power outage situations and the backup battery supporting abili-ties. In this paper, we proposed BatAlloc, a battery alloca-tion framework to address this issue.

How long do base station batteries last?

After using BatAlloc to allocate suitable numbers of battery groups for base stations, the average battery lifetime has achieved to 4.3 years, roughly 1.8 times longer than that of the original allocation. The results indicate that our framework can also better protect base station batteries and significantly prolong their average lifetimes.
