Battery inverter packages and prices

Overview

What is a solar battery backup system?

Solar battery backup guarantees a power source — even during a grid service failure or natural disaster. When the grid goes down, a solar battery backup system automatically detects and transitions your solar system from grid power to backup power. Protect your home from outages with our solar battery backup kits. [Shop What's in a kit?](#)

FAQ.

What types of batteries are used for solar energy storage?

There are several types of batteries commonly used for solar energy storage, each with its own unique characteristics and advantages. Lithium, Flooded Lead-Acid and Sealed Lead Acid batteries are three primary technologies used for solar energy storage, each with distinct characteristics.

Should I buy a battery with my solar kit?

Purchasing a battery along with your solar kit offers a pathway to energy independence from your utility company, especially when they provide a meager buyback rate for surplus energy you send to the grid. With a battery storage system in place, excess solar energy can be stored instead of sold to the utility for low rates.

How long do solar batteries last?

On average, solar batteries typically last between 5 to 15 years. However, with proper care and maintenance, some batteries can last up to 20 years or more. Do solar batteries work during power outages?

Yes!.

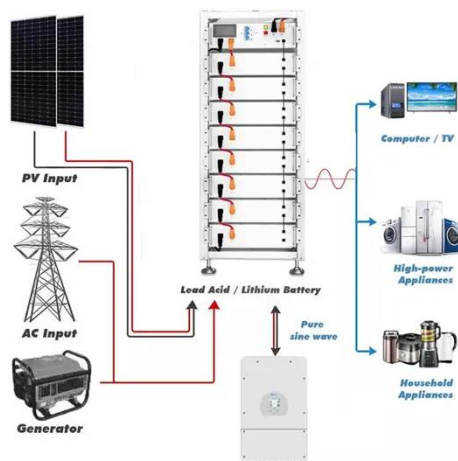

What size battery bank should I buy?

In addition to the above, a 20-40 kWh storage system would account for larger energy-intensive loads like your well pump, air conditioning, laundry, and dishwasher. Look for a battery bank in this size range if you need whole home backup for a single-family home.

What is the warranty on a server rack lithium battery?

A1: We offer 10-year warranty for 51.2v server rack lithium battery, covering non-human-induced battery failure issues. When you buy this solar kit, you are covered by the full manufacturer warranties on each component. Plus, you'll receive our lifetime customer and technical support. Q2: What communication methods are supported?
