China Solar Outdoor Site Energy

Overview

Will planned solar projects lead to continued growth in China's solar capacity?

Planned solar capacity projects will likely lead to continued growth in China's solar capacity. More than 720 GW of solar capacity are in development: about 250 GW under construction, nearly 300 GW in pre-construction phases, and 177 GW of announced projects, according to the Global Solar Power Tracker compiled by Global Energy Monitor.

How much solar power does China have?

China leads global utility-scale solar capacity for projects in announced, pre-construction, and construction phases. According to Global Energy Monitor's Global Solar Power Tracker, China has over 709 GW¹ of prospective solar capacity, representing over one-third of planned solar capacity worldwide in 2025.

How big is China's solar power pipeline?

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already operating 1.4 TW of solar and wind capacity, nearly 10% of which (141 gigawatts (GW)) came online in 2024.

How much solar power does China have in 2021?

In 2021, 53 GW of solar power capacity was added in China—40% of the global total.⁴⁷ At year end, total solar power capacity reached 307 GW.⁴⁸ In the first half of 2022, roughly 31 GW of solar power were added to the grid in China.⁴⁹ China also leads the world in solar manufacturing, as it has for many years.

How much solar capacity will China have in 2024?

The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity

installed in the United States at the end of 2024. Planned solar capacity projects will likely lead to continued growth in China's solar capacity.

Does China have more utility-scale solar?

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility-scale solar capacity installed in the United States at the end of 2024.
