

SolarInvert Energy Solutions

China solar powered generator in Kenya

Overview

The solar revolution in Galbet and other regions of Garissa was boosted in 2019 when a 50-megawatt solar power plant — the largest of its kind in East Africa, which Chinese engineers built — was commissioned on the outskirts of Garissa as part of Kenya's broader strategy to diversify its energy sources and advance rural electrification in marginalized areas. What is the largest solar power plant in Kenya?

Known as the Garissa Solar Power Plant, the 55 megawatts (MW) facility is the "largest grid-connected solar power plant in east and central Africa," according to Kenya's Rural Electrification and Renewable Energy Corporation (REREC).

What is Kenya's first solar power plant?

The project, the first major solar plant to tap into Kenya's vast solar resources, was connected to the national grid in September 2018 and commissioned in 2019, as the East African nation diversified its power generation to reduce energy costs. This photo taken on Nov. 11, 2018, shows the Garissa Solar Power Plant in northeastern Kenya.

Who is the largest private power generator in Kenya?

Following reporting of the annual results for Kenya Power, details emerged of the proceeds of electricity sold by generators in Kenya to the company. The numbers show that Ormat Technology's subsidiary OrPower4 is the largest private power generator in the country.

Will China build a 50 MW photovoltaic power plant in East Africa?

This project carried out in the close cooperation between China and Kenya will build a 50-MW photovoltaic power plant in the East Africa region, and the largest one ever.

Where is a photovoltaic power plant located in Kenya?

This photovoltaic power plant project in Kenya will be located in the Garissa County, with a preferential loan of 13 billion Kenyan shillings (about 128 million US dollars) by the Export-Import Bank of China.

Why should Kenya build a photovoltaic power plant?

It is expected to generate about 76.473-million-kWh electricity annually, meanwhile, help reduce local carbon dioxide emissions by about 64,190 tons and coal use by about 24,470 tons. Besides, the construction of the photovoltaic power plant project in Kenya will bring huge economic and social benefits along.
