Container communication site distribution box

Overview

What is a communications shelter?

Communications shelters are designed for fast construction of base station sites. Although shelters have distinct advantages over equipment rooms, they must also be assembled onsite. It takes time to wire and install control systems inside a shelter body. Traditional shelters are therefore not optimal for emergency communication scenarios.

What is a 'container shelter'?

ZTE has developed a “Container Shelter” that integrates the cabin system, AC distribution system, and monitoring system, as well as communications equipment, generator set, and lifting pole (holding pole or guyed tower).

What features are included in a container comms room?

There is also two wall penetrations with gland plates for cabling and racking to be installed. This Container Comms Room has all the features to make a comfortable work space for staff including air conditioning and internal wall insulation. Take a look at the video below to see the inclusions of this Container Comms Room design.

What is a communications equipment system?

Some communications equipment systems include detectors and alarms that transmit to centralized control centers within the system itself. High-rise buildings often utilize a second dedicated facility alarm and can be included as part of a central alarm system connected to the local fire department.

What is a communications enclosure & ancillary system?

An enclosure that houses communications equipment and ancillary systems only, designed such that equipment contained within can be accessed without the need for personnel to enter the cabinet. An enclosure is typically pre-wired and its equipment is pre-installed. Example: (See Figure 3-2 and Figure 3-4.)

An unmanned, weather-tight enclosure.

What are the shipping requirements for a self-contained radio site?

A “shipping container” that has been outfitted as a self-contained radio site must meet strict dimensional requirements, including protrusions such as HVAC, RF entry assemblies, or AC entrances, and must conform to applicable shipping requirements.
