# Container generator set installation case

## Overview

---

What is a containerised generator set?

On a regular basis, containerised generator sets (CGS) are placed on board ships to provide replacement power in case of a damage to one of the ship's generator sets, or additional power, e.g. to provide power to extra deck equipment or reefer containers. There are currently no clear rules and requirements for such time limited installations.

How do you install a generating set?

remove the tractor. (Also refer to the relevant section of the generating set installation guide.) Make sure the ground is hard enough to prevent the assembly from sinking. Using the jockey wheel or stands ensure the generating set is level. Lock the handbrake. Lower the rear stands and lock them.

Why should you buy a Cummins containerized generator set?

More Robust. More Control. More Reliability. Factory pre-integrated and customizable per site requirements, the new Cummins Containerized Series generator sets can provide significantly shortened lead time for installation, and a lower cost of ownership via a flexible design.

Is a generator liable for damage and abnormal wear?

The generator is liable to sustain damage and abnormal wear if these basic principles are not followed. This manual lists the main installation requirements for a "conventional" generating set built with an I.C. engine, a generator and a control panel.

How do you lift a generating set?

Lift truck. Attach the hoisting device slings to the generating set lifting lugs designed for this operation. Slowly tighten the slings. Make sure the slings are evenly attached and strong enough. Slowly hoist the generating set. Move the

set to the chosen site and place in position. Bring it down slowly while maintaining it in the right position.

How to maintain a generating set?

A 1 m clearance around the generating set must be considered as the minimum requirement for problem free maintenance. Make sure the doors of the canopy can be opened completely, the equipment is easily accessible for maintenance and the generating set can be removed from the room.
