---

As it turns out, this is easily done by using a DC to DC power supply, or "buck converter", and an appropriate adapter for your power tool batteries. How to connect a battery to a drill?

You must detach the battery clip from the power cable and solder it inside. If you separate the battery in a detailed manner, you can attach the power cord wire straight to the drill wire. By doing so, a direct link will be created. The connection is required.

Our power tool battery adapters allow your batteries from one brand to be used with tools from another brand of power tool.

Can I use a 12V battery for a 18V tool?

This is possible, but you'll find that a 18V battery pack can deliver pretty high peak current and power, around 20-30A and 400-600W. Therefore you'd need a rather beefy power supply. For the 12V tool you could use a recycled PC ATX power supply which can be found in a dumpster, but for the 18V tool this is not the case.

How to use a battery tool?

Took batteries out of a pack, attached a cable, connect it up with the lamp, works great. the voltage is easy, you should be able to use the voltage of a fully charged battery, for example around 14.4V for the 12V tool. The problem is, that battery tools can draw a lot of current from their batteries.

Do battery Tools draw a lot of current?
