Overview

What technology does photovoltaic laminated toughened glass use?

Our photovoltaic laminated toughened glass uses the CdTe thin film technology. The CdTe technology uses cadmium telluride in a thin semiconductor layer to convert sunlight into electricity. It has lower manufacturing costs compared to the crystalline silicon based technology – the most popular one to date.

Is laminated Photovoltaic Glass CE certified?

The standard laminated photovoltaic glass sold by us is CE certified and conforms to IEC 61215 (outdoor photovoltaic systems) and IEC 61730 (testing and safety requirements of photovoltaic panels). What is the Warranty for the Semi – Transparent Photovoltaic Glass?

Warranty on Product (Materials) – 10 years from date of shipment.

Can Photovoltaic Glass be incorporated into a double glazed unit?

Our photovoltaic glass can be incorporated into a double-glazed unit, curtain wall or can be used as such in various structures. Integration into a double-glazed unit/curtain wall is done exactly the same as in the case of conventional glazing. It is recommended to install the photovoltaic glass only on fixed windows.

What is the standard size of laminated Photovoltaic Glass?

The factory standard size of the laminated photovoltaic glass is 1200 mm x 600 mm x 7.00 mm. It is possible to order other dimensions as well. The maximum size that can be ordered is 1200 mm x 3600 mm. The glass thickness increases along with the surface, according to the international standards.

Can Photovoltaic Glass be installed in a double glazed unit/curtain wall?

Integration into a double-glazed unit/curtain wall is done exactly the same as in the case of conventional glazing. It is recommended to install the photovoltaic glass only on fixed windows. On the mobile ones, on request, ordinary windows can be installed, but with the same aesthetic characteristics (dummy panels).

Are Photovoltaic windows good for buildings?

It should be mentioned that photovoltaic windows improve the thermal and sound insulation of buildings (they are laminated windows) and also reduce the solar radiation induced inside buildings depending on the color and the degree of transparency chosen (between 2% and 90%). 2.
