Czech photovoltaic solar panel installation

Overview

How many solar power plants are there in the Czech Republic?

At the end of 2021, there were over 50,000 photovoltaic power plants with an installed capacity of about 2200 MWp in the Czech Republic. There were 500 solar parks with a capacity of over 1 MWp. During 2022, the number of installations rose to almost 85,000 PV plants with a total capacity of 2,460 MWp.

How does a rooftop PV system work in the Czech Republic?

In the Czech Republic, a rooftop PV system is usually developed and operated by a third-party developer or directly by the building owner or its affiliates. It is also possible for the building owner to develop the PV system and lease it to a third party, but this is not very common in the Czech market.

Can a building owner develop a PV system?

It is also possible for the building owner to develop the PV system and lease it to a third party, but this is not very common in the Czech market. Third-party developers need to secure the right to use the roof in order to install and operate the PV system. This is usually done by establishing an easement or lease over the property.
