Differences between outdoor power supply models in the Middle East

Overview

Does the Middle East have a power supply?

Yet as the Middle East is flush with cheap natural resources, the region's power makeup is still almost exclusively dominated by oil and gas.⁴ The region currently uses oil and natural gas to meet 97 percent of its electricity needs. Economic growth hinges upon connectivity and power generation.

Will solar power power the Middle East?

The Middle East is a growing region for power generation and will require additional capacity to meet its economic ambitions and the needs of its people. There is no doubt that renewable sources of energy, especially solar, will play a major part in its future power mix.

Is the Middle East ready for a new era of electricity?

There is enormous potential for the Middle East's power sector, and plenty of room for a variety of new technologies and companies to help move into electricity's new era.

Are Middle East power utilities ready for the future?

Given the scope of changes coming between now and 2030, Middle East power utilities cannot wait and see. They must understand the transformation occurring in their industry, analyze the impact on their strategies and operating models, and make the necessary changes.

What is changing in the Middle East's power sector?

This thought-provoking report will broaden the understanding of any audience confronting the changing dynamics of the Middle East's power sector. The power market is transforming as energy independence and economic diversification play a bigger role.

How is Saudi Arabia diversifying its energy mix?

A Region Source: PTR Inc.Saudi ArabiaSaudi Arabia is diversifying its energy mix, with plans to introduce nuclear power alongside a significant push for renewable energy. The country aims to achieve 50% renewables in its generation mix by 2030, with initiatives such as shortlisting contr
