

## SolarInvert Energy Solutions

**Does the energy storage container have to have a sprinkler**

## Overview

---

Do I need a sprinkler system for a battery ESS?

A: Testing has shown that water is the most effective agent for cooling for a battery ESS. For this reason, a sprinkler system designed in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, is required by NFPA 855, Standard for the Installation of Energy Storage Systems.

Should energy storage systems be protected by NFPA 13?

According to the Fire Protection Research Foundation of the US National Fire Department in June 2019, the first energy storage system nozzle research based on UL-based tests was released. Currently, the energy storage system needs to be protected by the NFPA 13 sprinkler system as required.

Does a sprinkler system need to be NFPA 13 compliant?

Currently, the energy storage system needs to be protected by the NFPA 13 sprinkler system as required. The minimum density of the system is 0.3 gpm/ft<sup>2</sup> (fluid speed 0.3 gallons per minute square foot) or more than room area or 2500 ft<sup>2</sup> (square feet), whichever is the smallest.

Can a sprinkler system cool an ESS fire?

Testing has shown water to be the most effective medium for cooling an ESS fire. A sprinkler system that complies with NFPA 13, Standard for the Installation of Sprinkler Systems, should be installed in buildings where an ESS is installed.

Do energy storage systems need a 3 foot gap?

From a practical point of view, one of the most relevant issues with energy storage systems is whether there is enough room to store the required energy. NFPA 855 requires a three foot gap between the 50 kWh energy storage system group and between the 50 kWh group and the wall.

What are the NFPA 855 requirements for energy storage systems?

For example, for all types of energy storage systems such as lithium-ion batteries and flow batteries, the upper limit of storage energy is 600 kWh, and all lead-acid batteries have no upper limit. The requirements of NFPA 855 also vary depending on where the energy storage system is located.
