

## SolarInvert Energy Solutions

# EU Uninterruptible Power Supply Backup

## Overview

---

What is an uninterruptible power supply (UPS)?

A UPS is an electrical device that isolates the electrical installation from power supply quality issues, and provides emergency power when mains power fails. It does this by supplying energy stored in batteries.

What is a battery backup or uninterruptible power supply?

An uninterruptible power supply (UPS) or battery backup is a device that can power devices for several hours, depending on the model and the power consumption of the device, in the event of a power outage.

What is the back-ups pro uninterruptible power supply?

The Back-UPS Pro uninterruptible power supply provides power to your critical devices during an outage, allowing you to continue working or gaming, and stay connected to your network. Ideal for PCs, home office electronics, networking devices, SmartHome devices and gaming consoles.

What is a continuous power supply (UPS)?

UPS is the short version of "uninterruptible power supply". In many applications a continuous power supply is important because power fluctuations and outages can cause damage to control equipment as well as unexpected down time. This situation can lead to a loss of productivity and revenue.

What are UPS modules with capacitor storage?

UPS modules with capacitor storage are equipped with integrated electrochemical double layer capacitors. In case of a power fault they guarantee an uninterrupted power supply for several seconds. By using such UPS modules, processes can be completed and data saved, for instance.

Why do you need a backup system?

As the number of power faults and outages increases worldwide, many users are installing backup systems, like a UPS module. During power failures, a UPS module can maintain the power supply for up to several hours. This means critical system components can be supplied continuously.

## EU Uninterruptible Power Supply Backup

---

### Backup , Uninterruptible Power Supply Sources

Backup power sources (BPS) are devices designed to ensure a continuous energy supply in case of electrical network disruptions or outages. They are essential elements that help protect ...
