

## SolarInvert Energy Solutions

# Eastern Europe Dazhou Communication Base Station Liquid Flow Battery

## Overview

---

What is Dalian flow battery energy storage peak-shaving power station?

The Dalian Flow Battery Energy Storage Peak-shaving Power Station, which is based on vanadium flow battery energy storage technology developed by DICP, will serve as the city's "power bank" and play the role of "peak cutting and valley filling" across the power system, thus helping Dalian make use of renewable energy, such as wind and solar energy.

Who makes Dalian constant current energy storage power station?

The power station is constructed and operated by Dalian Constant Current Energy Storage Power Station Co., Ltd. and the battery system is designed and manufactured by Dalian Rongke Energy Storage Technology Development Co., Ltd.

What is China's first large-scale chemical energy storage demonstration project?

The project is the first national large-scale chemical energy storage demonstration project approved by the National Energy Administration of China, with a total construction scale of 200MW/800MWh. The grid connection is the first phase project of the power station, with a scale of 100MW/400MWh.

What is a vanadium flow battery?

As a vanadium flow battery, the new energy storage system differs from the common lithium-ion batteries in use in today's electric vehicles and smartphones. They use massive tanks to store chemical energy in the form of liquid electrolytes, which can be converted into electricity by passing the fluid through a special membrane.

How much electricity does Dalian power station use a day?

Based on China's average daily life electricity consumption of 2 kWh per

capita, the power station can meet the daily electricity demand of 200,000 residents, thus reducing the pressure on the power supply during peak periods and improving power supply reliability in the southern region of Dalian.
