Ecuador power plant energy storage project construction

Overview

Will Ecuador get a CCCP power plant in 2021?

The Energy Ministry released tenders in 2021 for a 500 MW renewable block (wind, biomass, solar), 400 MW Natural Gas Combined Cycle Power Plant (CCCP), and a Northeast Transmission System to supply the Ecuadorian oil system. The Energy Ministry has not yet awarded the contracts.

What is Ecuador's largest hydropower plant?

CCS is the country's largest hydropower plant by generation capacity. Ecuador's state-owned electricity company CELEC imports electricity from neighboring Colombia, costing \$400 million in 2022. It is also increasing diesel purchases from Petroecuador to power its thermal electric power plants.

Will Ecuador have a power shortage in 2023?

Ecuador is experiencing power generation shortages in 2023, and analysts expect them to extend to 2024. The Energy Ministry and CELEC plan to issue tenders to add additional generation. Future projects under consideration include hydro, geothermal, wind, and biomass.

Does Petroecuador use diesel to power its thermal power plants?

It is also increasing diesel purchases from Petroecuador to power its thermal electric power plants. The 1500 MW Coca Codo Sinclair hydropower plant generated 7,202 GWh in 2022 (22 percent of the 33,008 GWh of gross electricity generation).

How many hydropower plants are there in Ecuador?

Ecuador has eight large scale hydropower plants in the East with 3,885 MW of installed capacity. This includes Coca Codo Sinclair (1500 MW) and Paute Molino (1,100 MW).

How much power does Ecuador need a year?

Electricity demand grows by 200 MW every year, meaning Ecuador should add 250 MW or 300 MW of new power generation each year. However, Ecuador has added minimal additional generation in the last three years.
