

**SolarInvert Energy Solutions**

# **Ester uninterruptible power supply**

## Overview

---

What is an uninterruptible power system (UPS)?

Uninterruptible Power Systems (UPS) ensure seamless, continuous power supply with features like regulated voltage, power conditioning, and battery backup, making them ideal for critical applications such as industrial controls, IT systems, and emergency systems.

Why do we need uninterruptible power supplies?

However, during transmission and distribution, it is subject to voltage sags, spikes and outages that can disrupt computer operations, cause data loss and damage equipment. The uninterruptible power supplies protect the connected equipment from power problems and provide battery backup during power outages.

How do I Choose an uninterruptible power supply?

Choose a power output that is equal to or greater than the power your equipment requires. Ht. Wd. Dp. Specs. Choose from our selection of uninterruptible power supply in a wide range of styles and sizes. In stock and ready to ship.

What is a ups solution for sensitive electrical loads?

A UPS solution for sensitive electrical loads is used to provide a power interface between the utility and the sensitive loads, providing voltage that is:  
1. Free of all disturbances present in utility power and in compliance with the strict tolerances required by loads.

Why is a ups a good power supply?

Stepping in to replace utility power with no transfer time, i.e. without any interruption in the supply of power to the load, through use of a static switch. These characteristics make UPS units the ideal power supply for all sensitive applications because they ensure power quality and availability, whatever the

state of utility power.

What is a static bypass on an ups?

This type of UPS is generally equipped with a static bypass, sometimes referred to as a static switch. The load can be transferred without interruption to the bypass AC input (supplied with utility or standby power, depending on the installation), in the event of UPS failure, load current transient (inrush or fault currents) or load peaks.
