# Greece is a photovoltaic energy storage customer

## Overview

---

What is the state of photovoltaics in Greece for 2022?

HELAPCO's report on the state of the photovoltaics sector in Greece for 2022 showed significant expansion. More photovoltaics were installed last year in Greece than any other technology, with a share of 85%. The country was third in Europe in terms of the technology's share in power production, with 13.6%.

How much photovoltaic capacity does Greece have?

As of December 2013, the total installed photovoltaic capacity in Greece reached 2,419.2 MWp of which 987.2 MWp were installed in the period between January–September 2013 despite the financial crisis. Greece ranks 5th worldwide with regard to per capita installed PV capacity.

Can a PV power plant operate profitably in Greece?

The renewable energy produced each year from the PV power plant varied between 33.35 MW h in Ioannina and 41.63 MW h in Tymbakion while the average value for the 46 locations is 37.61 MW h. The results of the financial analysis demonstrate that a PV power plant can operate profitably at any of the considered sites in Greece.

How much solar power does Hellenic have in 2022?

The country was third in Europe in terms of the technology's share in power production, with 13.6%. According to the annual report by the Hellenic Association of Photovoltaic Companies, HELAPCO, new solar power installations amounted to 1,392 MW in 2022 in peak capacity terms, pushing the total to 5,526 MW.

Is solar power a viable energy source for 2030?

In the latest version, the authorities have cut the target capacity to 13.4 GW from the initially proposed 14.1 GW, prompting a reaction from HELAPCO. Solar power is the only energy source that can currently muster the

investments needed to realize an ambitious goal for 2030, it stressed.

Is Greece catching up with self-consumption?

It is also notable that new self-consumption installations more than doubled in a year to 116 MW from 44.6 MW, reaching 215.8 MW. Traditionally, it is a segment where Greece lagged, but now it appears that it has picked up pace, as more consumers are eager to reduce their electricity bills.
