

SolarInvert Energy Solutions

Greek Energy Storage Cooperation Project

Overview

Greece plans to provide EUR 1 billion in state subsidies to support two solar power projects, with a total capacity of over 800 MW and with integrated energy storage units. Why is Greece focusing on energy storage?

Greece has been actively focusing on energy storage since the emergence of the RES “boom” in 2020. The country recognised the pivotal role of energy storage in the energy transition and emphasised its importance in the first iteration of the country’s National Energy and Climate Plan in 2019.

Will Greece install 900 MW of storage by 2030?

According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030. Thus far, 900 MW has been allocated via the Greek Regulatory Authority for Energy, Waste, and Water (RAAEY) tenders. Therefore, the remaining share would be delivered under the new plan but without any subsidy support.

How much power will Greece have by 2030?

The government now aims for 2.65 GW of battery projects on the transmission grid and a further 900 MW on the distribution grid. According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030.

Who is eligible to participate in the first energy storage auction?

To be eligible to participate in the first auction, projects must hold a valid Energy Storage Licence while a set of other eligibility criteria (including soundness of the technology used and minimum power injection capacity) must be met.
