

## SolarInvert Energy Solutions

# High-performance zinc-based flow battery

## Overview

---

Alkaline zinc-based flow batteries (AZFBs) are considered one of the most promising candidates for large-scale energy storage owing to Zn abundance, cost effectiveness, intrinsic safety and eco-friendliness. Are zinc-based flow batteries good for distributed energy storage?

Among the above-mentioned flow batteries, the zinc-based flow batteries that leverage the plating-stripping process of the zinc redox couples in the anode are very promising for distributed energy storage because of their attractive features of high safety, high energy density, and low cost .

Are alkaline zinc-based flow batteries suitable for stationary energy storage applications?

Alkaline zinc-based flow batteries are well suitable for stationary energy storage applications, since they feature the advantages of high safety, high cell voltage and low cost. Currently, many alkaline zinc-based flow batteries have been proposed and developed, e.g., the alkaline zinc-iron flow battery and alkaline zinc—nickel flow battery.

Are neutral zinc-iron flow batteries a good choice?

Neutral zinc-iron flow batteries (ZIFBs) remain attractive due to features of low cost, abundant reserves, and mild operating medium. However, the ZIFBs based on  $\text{Fe}(\text{CN})_6^{3-}/\text{Fe}(\text{CN})_6^{4-}$  catholyte suffer from  $\text{Zn}_2\text{Fe}(\text{CN})_6$  precipitation due to the  $\text{Zn}^{2+}$  crossover from the anolyte.

What are zinc-bromine flow batteries?

Among the above-mentioned zinc-based flow batteries, the zinc-bromine flow batteries are one of the few batteries in which the anolyte and catholyte are completely consistent. This avoids the cross-contamination of the electrolyte and makes the regeneration of electrolytes simple.

What are the different types of zinc-based flow batteries?

Since the 1970s, various types of zinc-based flow batteries based on different positive redox couples, e.g.,  $\text{Br}^- / \text{Br}_2$ ,  $\text{Fe}(\text{CN})_6^{4-} / \text{Fe}(\text{CN})_6^{3-}$  and  $\text{Ni}(\text{OH})_2 / \text{NiOOH}$ , have been proposed and developed, with different characteristics, challenges, maturity and prospects.

What are alkaline zinc-iron flow batteries (AZIFBs)?

Alkaline zinc-iron flow batteries (AZIFBs) is explored. Zinc oxide and ferrocyanide are considered active materials for anolyte and catholyte. DIPSO additive is suggested to suppress formation of zinc dendrite. DFT calculations help optimize the most stable DIPSO-zinc complex structure.

## High-performance zinc-based flow battery

---

### Simultaneous regulation on solvation shell and electrode

...

Sep 15, 2024 · As a result, the Zn-based flow battery with the proposed hybrid electrolyte delivers a stable cycling performance over 200 cycles and high reversibility with an average CE of over
