ENERGY STORAGE SYSTEM

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

The advertisement features a white, rectangular Energy Storage System unit with a grey door and a control panel on the right side. The unit is shown against a light grey background. The background of the entire advertisement is a scenic landscape with a large field of solar panels in the foreground, a small building and trees in the middle ground, and snow-capped mountains in the background under a hazy sky.

Overview

Will Honiara be powered by hydropower?

Honiara is set to meet up to 70 percent of its electricity demand by hydropower by 2028. The Tina River Hydropower Development Project (TRHDP) in Central Guadalcanal is expected to meet this target.

How will the Tina River Project Impact Honiara?

The project's impact will be improved economic conditions for Honiara in line with the Solomon Islands National Development Strategy, 2016-2035. The outcome will be the increased generation of renewable energy on the Honiara grid. The project's output will be the Tina River Hydropower Plant constructed.

How can I support the My Honiara campaign?

Support the My Honiara Campaign by joining Team Honiara. You can also provide feedback, request information on council services and activities, and find out about what's happening in the Council and the Community. Additionally, check for Job Vacancies, Tenders, and Expressions of Interest on the website and join Team Honiara.

Should Oceania export energy plans?

Should they succeed, it should export these plans as a blueprint to energy access throughout the rest of Oceania. The Islands principal generating units are diesel fueled power generators. Approximately 80% of generating capacity and 87% of all energy generated came from diesel facilities.

Where does Seia consume the most power?

Information compiled from SEIA's 2018 annual report. Power consumption in the various sub-regions correlates with population. Accordingly, the province of Guadalcanal, where the capital city of Honiara is located, is the largest load consuming province SEIA services.

How does Seia generate electricity?

The Islands principal generating units are diesel fueled power generators. Approximately 80% of generating capacity and 87% of all energy generated came from diesel facilities. SEIA also operates a number of outstations (mini-grids) that are traditionally defined by diesel generation, but may also include a small number of photo-voltaic facilities.
