How many energy storage battery manufacturers are there in the United States

Overview

How many battery storage installations are there in the United States?

After showing a year-over-year increase of 80 percent in 2023, the capacity of battery storage installations in the U.S. was projected to reach almost 30 gigawatts by the end of 2024. That year, the number of operational and prospective battery storage projects grazed 1,000, with most of them located in California and Texas.

How many battery factories are there in the United States?

Apart from Tesla's Gigafactory, the U.S. has only two other battery production facilities. If current trends continue, there would be just ten by 2030. At that time, China will have 140 battery factories and Europe, according to this map, close to 30.

How much battery storage capacity is there in the United States?

As of October 2022, 7.8 GW of utility-scale battery storage was operating in the United States. Developers and power plant operators expect to be using 1.4 GW more battery capacity by the end of the year. Battery storage capacity in the United States was negligible prior to 2020, when electricity storage capacity began growing rapidly.

How many battery manufacturers are there in the world?

The total capacity attributes to 119 battery manufacturing facilities that are operational, under construction or announced by more than 50 vendors. Asian manufacturers – CATL, LG Chem, BYD, SK Innovation are leading in capacity arms race, followed by emerging European vendors Northvolt and ACC (JV established by Saft and PSA Group).

What is the market share of energy storage in 2024?

By technology, batteries led with 82% of the United States energy storage market share in 2024, while hydrogen storage is projected to expand at a

28.5% CAGR through 2030.

Which energy storage technology is most popular in 2024?

Batteries became the main energy storage technology in the United States in 2024, surpassing hydro pumped storage. After showing a year-over-year increase of 80 percent in 2023, the capacity of battery storage installations in the U.S. was projected to reach almost 30 gigawatts by the end of 2024.
