How many wind power stations are there in Seychelles

Overview

How many wind turbines are there in the Seychelles?

Masdar developed and delivered the first large-scale renewable energy project in the Seychelles. Owned and operated by the Seychelles government, the project consists of eight wind turbines across two small islands off the coast of Mahe - five turbines on Romainville Island and three at Ile du Port.

What is the Port Victoria wind power project?

The Port Victoria Wind Power Project, Masdar's 6MW wind farm in the Republic of Seychelles, is the country's first large-scale renewable energy project. It accounts for more than 8 per cent of the grid capacity on the archipelago's main island of Mahe, where 90 per cent of the country's residents live.

What does the Seychelles government do?

The Seychelles Government is committed to providing adequate, reliable and affordable energy to meet future energy consumption needs and to underpin strong economic growth through consumable energy initiatives. The Seychelles enjoy favourable conditions for renewable energy (RE) resources, such as wind and solar.

Who built the Seychelles wind farm?

Unison Company, a South Korean manufacturer and contractor, supplied the 750-kilowatt turbines. Before the wind farm began operations, the Seychelles depended entirely on imported fossil fuels to generate energy.

How is the Seychelles energy project financed?

The project is a major step toward meeting the Seychelles' target of producing 15 percent of its energy from renewable sources by 2030. It was financed through a grant of US\$28 million from the Abu Dhabi Fund for Development, a government entity that enhances living standards in developing nations.

What is the Seychelles energy plan?

It targets an ambitious transformation and diversification of the Seychelles' currently 85 MW diesel-dominated electricity generation capacity (on Mahé, Praslin and La Digue), aiming at replacing diesel generators with domestic and international public and private financing.
