# How much is the lithium battery pack in Afghanistan

## Overview

---

Could lithium be used to produce batteries in Afghanistan?

The Taliban spokesman even mentioned the possibility to use the lithium to produce batteries inside Afghanistan and export them. Such a prospect appears far-fetched though. «Afghanistan has all the raw materials necessary to produce lithium-based batteries,» Dr. Wnuk told SIGA.

Is a lithium-ion battery race taking place in Afghanistan?

While Goldman Sachs predicts a tripling of the lithium market by 2025, a race to secure supplies is taking place in Afghanistan. The lithium-ion battery story begins with chemistry and ends with innovation.

Does Afghanistan have a lot of lithium?

It is speculated that Afghanistan has plenty of lithium. The country's lithium deposits occur in dry lake beds in the form of lithium chloride; they are located in the western Province of Herat and Nimroz and in the central east Province of Ghazni.

Could Afghanistan become the 'Saudi Arabia of lithium'?

For example, in 2010, i.e. well over a decade ago, The New York Times cited an internal memorandum of the U.S. Department of Defense stating «that Afghanistan could become the 'Saudi Arabia of lithium'».

Should lithium-containing rocks be shipped abroad?

However, Dr. Wnuk cautioned that the effectiveness of teaching locals to do this has its limits. Another prospect would be to at least pre-process and pre-sort lithium-containing rocks in Afghanistan before shipping them abroad which would lower transport costs, as much less waste rock would be shipped.

Are alleged lithium-containing rocks a sign of a margin operation?

The allegedly lithium-containing rocks that the Taliban seized in January 2023 and the efforts of the cited Afghan businessman and his partners are arguably a sign of such undertakings that Dr. Whuk described as «very, very marginal operations set up by a number of middlemen, looking for some profit».
