# How to connect external power supply to battery cabinet

## Overview

---

How do you connect a battery to a power supply?

The supply should use a coax, center-positive 2.1mm internal-diameter plug and deliver 4.5VDC to 5.5VDC and 1A of current (i.e., at least 5W of power). An external battery pack can be used by connecting the battery's positive terminal to center pin of JP3 and the negative terminal to pin labeled J12, directly below JP3.

How do I connect the external power supply?

To connect the external power supply, tap the 5V lane and ground lane of the USB line or cable. This ensures that the external device draws power from the external power supply, not the PC. Refer to the circuit above for the connections.

Can batteries be used as external power supply?

Yes! The solution is very simple, but you need to take care to not doing anything wrong. So, our solution is using Batteries as external power supply! Some external power supply examples images:.

Can Arduino be a power supply?

Is Really simple, You will see: Well, power supplies are used for every projects with Arduinos, like controlling Leds, Servo motors, Relays and more! But sometimes, The Arduino can't be a power supply because of the project, like controlling more than 1 servo motor with the only 5v of the Arduino.
