How to connect the base station battery to the power line

Overview

How do I connect a base station?

Base Station Connection and Routing — Fully insert the Power Cable and Interface (I/F) Cable connectors into their respective ports in the underside of the Base Station. Then connect to an AC Adapter, and plug the AC power cord into the (wall) outlet. Figure 5. Connecting the Base Station.

How do I attach a DC power cord to a base station?

The DC power cord for the adapter can be secured to the bottom of the base in order to maximize the mechanical retention of the cable itself. The routing of the power cord can be changed to accommodate base station positioning: horizontal, stand or wall mount.

How to build a cascade of batteries?

To build a cascade of batteries (e.g. a stationary battery near solar panels and an APC at base power input), separate networks with transformers. Prefer a tree-like (or star-like) scheme of power supply over chain (cascades).

Should a battery be on a separate subnet?

It is better to have a battery on each of separate subnets (ex. production floor and gas processing floor), even if you will not use its full potential. Always separate electrical networks with power generation (solid generators, solar panels, etc.) and power consumers. Do it with batteries and APCs.

What is a battery kit?

Kit (Battery) is used to create stationary battery cells, which can provide big and stable energy storage or energy buffer for your power needs. Its energy storage is 3.6MJ or 1kWh. Any battery slowly loses stored energy. Batteries in a vacuum drain at 50W. Batteries in atmosphere at drain at 10W at or above 0°C.

What happens if a battery drains at 0°C?

Batteries in atmosphere at drain at 10W at or above 0°C. Below 0°C, the power loss increases linearly to 50W at 1°K. If the battery is in a room, the lost energy is released into the air as heat.

How to connect the base station battery to the power line

How to connect base station batteries in series with power

...

To connect batteries in a series, use a jumper wire to connect the first battery's negative terminal to the second battery's positive terminal. This leaves you a positive terminal on the first battery ...
