# How to install a small solar powered storage container

## Overview

---

Can solar panels be used on shipping containers?

Solar panels on shipping containers provide a smart and sustainable way to generate energy, for container homes, offices, or remote shipping container facilities. Overall, they are a great way to use the roof of a shipping container.

How many solar panels in a 20ft shipping container?

A 20ft shipping container can typically accommodate 6 to 12 solar panels, depending on panel size and mounting configuration. With six to twelve 300W panels, you can expect around 1.8 kWp to 3.6 kWp of power. For more compact setups or higher-efficiency panels (400W or more), up to 12 panels could generate as much as 4.8 kWp.

Do solar panels need to be secured to a container?

The solar panels and frame need to be safely secured to the container to withstand local environmental conditions. The weight of the panels and frame should rest on the corner castings and top side rails of the container and not on the roof panels.

Should you upgrade your shipping container home with solar power?

Upgrading your shipping container home or your container office with solar power can help to reduce electricity costs or even make the transition to off-grid living possible. These systems can power heating, lights, computers, etc. making them highly convenient for shipping container homes, offices and so on.

What is an example of a solar-powered cold storage facility?

Another example comes from a student engineering project at the University of Liverpool, which collaborated with a farming collective in Zanzibar to create a solar-powered cold storage facility, the Solar Chiller. They used Domino Clamps and brackets to attach a Unistrut frame to the container roof.

How should a shipping container be positioned?

To maximise solar energy capture throughout the day, the shipping container should be positioned with its long sides running east to west. This ensures that the broad roof surface faces south (in the Northern Hemisphere) or north (in the Southern Hemisphere), providing the best exposure to sunlight for solar panels.
