# How to set quota for battery cabinet commissioning

## Overview

---

What is a pre-startup & commissioning check?

Pre-startup and commissioning checks/verification is essential steps in ensuring the proper installation and reliable operation of a battery system. What are the key pre-startup and commissioning checks for a battery system?

Verify that the battery frame is assembled in accordance with the manufacturer's recommendations.

Why do lead-acid batteries need a commissioning charge?

Basically, for all lead-acid batteries, the rate of self discharge increases with storage temperature. The total charge lost is a function of the time in storage at a given temperature. The primary purpose of the commissioning charge is to make sure a new battery is fully charged before it is placed into operational service.

Do VLA batteries require a commissioning charge?

Some VRLA batteries do not require a commissioning charge if they have been installed and are ready to be placed in service shortly after receipt. This may also be the case for some VLA batteries. The maximum time is frequently specified by the battery manufacturer.

Are pre-commissioning measurements and checks always made?

Pre-commissioning measurements and checks are not always made. When it is performed, steps can be omitted or, commissioning is performed incorrectly. The result can be myriad problems for the life of the battery. New system commissioning must be carried out properly and documented for the record.

What is a battery energy storage system (Boq)?

A detailed BOQ ensures clarity, precision, and efficiency in the planning and

execution of a Battery Energy Storage System project. By addressing all components – ranging from batteries and PCS to civil work and installation – this framework serves as a comprehensive guide to optimize costs and performance.

What is a commissioning charge?

The total charge lost is a function of the time in storage at a given temperature. The primary purpose of the commissioning charge is to make sure a new battery is fully charged before it is placed into operational service. Noteworthy is the fact that if an acceptance (capacity) test is to be performed, it is vital the battery is up to the task.
