

SolarInvert Energy Solutions

Huawei Lome cylindrical lithium battery

Overview

Why should you choose Huawei intelligent lithium batteries?

Simple: IoT networking, from manual to Cloud O&M Intelligent: backup power to energy storage system Efficient: precise configuration and investment Safe: fault prediction, passive to proactive Huawei intelligent lithium batteries support AI dynamic peak staggering, evolving from backup power to energy storage systems.

What is a 3 layer battery management system (BMS)?

The three-layer battery management system (BMS) ensures the reliability of lithium batteries. A built-in fire extinguisher is used. Before the BCB switch is turned on, the SmartLi can automatically detect the insulation impedance of the positive and negative battery terminals to PE, ensuring safe startup and operation.

What is a smart lithium battery?

The SmartLi provides lithium battery cell short-circuit detection and alarm functions to ensure the safe operation of lithium batteries. High energy density reduces the footprint compared with lead-acid batteries. The intelligent BMS reduces routine O&M costs.

How many cycles can a lithium battery last?

When multiple cabinets are connected in parallel, only the master cabinet has an LCD. The cycle life is long and can reach 5000 cycles (cell: 25°C, 0.5C charge/1C discharge, 50% DOD, 5000 cycles at 70% EOL). The three-layer battery management system (BMS) ensures the reliability of lithium batteries. A built-in fire extinguisher is used.

What is a 18650 lithium-ion battery made of?

Experimental methods and validation The experimental sample used in this study is the 18650 lithium-ion battery, which is composed of stainless steel

shell and cylindrical jellyroll. The jellyroll consists of layers of cathode, anode, separator, and electrolyte, wound into a spiral structure in the sequence of 'cathode-separator-anode-separator'.
