Huawei Vatican rooftop photovoltaic panels

Overview

Does the Vatican have a rooftop solar system?

The Vatican, the world's smallest sovereign state, has stepped up its fight against global warming by installing a huge rooftop solar energy system.

How many solar panels does the Vatican have?

The 2,400 panels, designed by a Germany company, will heat, light and cool the hall and several surrounding buildings, producing 300 kilowatt hours (MWh) of clean energy a year. The hall, built in 1971 and one of the Vatican's newest buildings, has a sweeping, wave-shaped roof which made the project feasible.

Can a photovoltaic roof save the Holy See?

More than 2,000 photovoltaic panels have been fixed to the roof of one of the city state's main buildings, enabling the Holy See to cut its carbon dioxide emissions by about 225 tonnes a year, saving the equivalent of 80 tonnes of oil annually.

How long did it take ACEA to install a photovoltaic roof?

Italian energy supplier ACEA installed the photovoltaic roof in just six months in the Courtyard of the Corazze entrance. "The most difficult thing is to integrate and find spaces to build photovoltaic infrastructure in places that are already heavily built up," said ACEA president, Barbara Marinali.

How much solar energy does Pope Benedict XVI use?

The solar energy system covers the massive roof of the "Nervi Hall", where Pope Benedict XVI holds general audiences. The 2,400 panels, designed by a Germany company, will heat, light and cool the hall and several surrounding buildings, producing 300 kilowatt hours (MWh) of clean energy a year.

Does Vatican City have solar power?

Yes. Vatican City has joined Albania, Bhutan, Nepal, Paraguay, Iceland, Ethiopia and the Democratic Republic of Congo to become one of just eight countries in the world to generate 100% of its electricity from renewable sources. Several church organizations around the world are making the move to solar.
