

SolarInvert Energy Solutions

Huawei photovoltaic tiles

Test certification

Overview

Are photovoltaic floor tiles sustainable?

Photovoltaic floor tiles combine solar energy generation with durable paving materials, offering sustainable energy solutions for urban spaces, public areas, and smart cities, while reducing carbon emissions and saving space. [Home / Blog / Walkable Sunshine: Photovoltaic Floor Tiles Leading the New Trend in Sustainable Development.](#)

What are hiitio photovoltaic floor tiles made of?

HIITIO's photovoltaic floor tiles are composed of HJT solar cell modules, tempered glass, PVB, and a bottom support structure. Structure Details: The glass thickness range is flexible, with options such as 6mm, 8mm, 10mm, and 12mm. 1. Front and Rear Protective Glass.

What are photovoltaic floor tiles?

As global urbanization accelerates, space resources in cities are becoming increasingly scarce. Photovoltaic floor tiles offer an innovative solution by integrating photovoltaic technology into ground paving, eliminating the need for additional land. Public Spaces: Squares, trails, parking lots, etc.

Are Photovoltaic tiles a good investment?

By utilizing clean electricity generated by photovoltaic tiles, cities and businesses can: Decrease dependence on traditional power grids. Reduce energy costs. Photovoltaic floor tiles offer a practical pathway to achieve a low-carbon economy, enhance energy self-sufficiency, and promote global energy transformation.

How much electricity does a photovoltaic Tile Project generate?

Sources: prescouter.com HIITIO's photovoltaic tiles leverage HJT cells for optimal power generation, achieving a maximum output of 180W per square meter. For instance, a 500㎡ photovoltaic floor tile project can generate

approximately: 245 kWh of electricity per day. 89,425 kWh of electricity annually. Reduces 62,598 kg of CO₂ emissions annually.

How much electricity does a 500m² photovoltaic floor tile project generate?

For instance, a 500m² photovoltaic floor tile project can generate approximately: 245 kWh of electricity per day. 89,425 kWh of electricity annually. Reduces 62,598 kg of CO₂ emissions annually. Carbon absorption by 2,845 trees per year.
