Incremental cost of photovoltaic curtain wall

Overview

What is a photovoltaic curtain wall?

A photovoltaic curtain wall has the added benefit of generating electricity over the building's life. Whilst it costs a bit more than standard curtain walling, the incremental cost of a BIPV facade will typically be paid back within around five years. The standard material for a photovoltaic facade is thin film glass (see picture below).

What are the benefits of a photovoltaic curtain wall?

It also improves the aesthetic appearance of the building. A photovoltaic curtain wall has the added benefit of generating electricity over the building's life. Whilst it costs a bit more than standard curtain walling, the incremental cost of a BIPV facade will typically be paid back within around five years.

Does photovoltaic curtain wall system cost more than traditional curtain-wall system?

Photovoltaic curtain-wall system may have higher labor costs than traditional curtain-wall and other traditional systems especially in the United States. The demand and manufacturing production volumes are lower in United States than Europe. Existing BIPV system projects show high design and final project costs.

How photovoltaic curtain-wall system can save a building owner money?

Basically photovoltaic curtain-wall system can save the building owner money by reducing construction material and electricity costs, providing education, enhancing power quality and power reliability, and providing tax credits. The entire savings, especially in the long term might be really impressive.

Can Photovoltaic Glass be mounted on a curtain wall?

Photovoltaic glass can be mounted using most standard curtain walling and bonded glazing systems, from suppliers such as Nvelope, Technal, Kawneer,

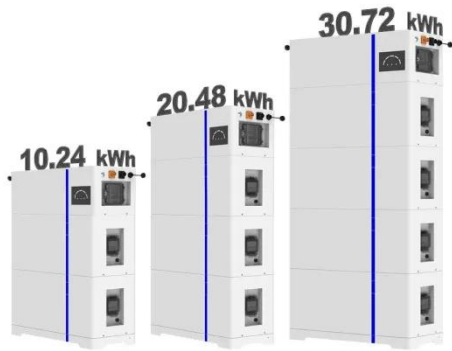

Comar, SAPA, Reynaers, SAS, and Schüco. The standard aluminium profiles require only slight adaptation to accommodate the wiring and connectors required for solar glazing.

What are the benefits of a curtain wall?

Standard curtain walling improves the thermal insulation of the building, leading to reduced HVAC costs and reduced heat loss. It also improves the aesthetic appearance of the building. A photovoltaic curtain wall has the added benefit of generating electricity over the building's life.
