Overview

What is a battery energy storage supply chain forecast?

It highlights key trends for battery energy storage supply chains and provides a 10-year demand, supply and market value forecast for battery energy storage systems, individual battery cells and battery cell subcomponents (including cathode, anode, electrolyte and separators).

What is the battery supply chain database?

IIR's Battery Supply Chain Database is a comprehensive roadmap for tracking the various manufacturing and usage implementation aspects of the industry.

What is a power supply chain database & how does it work?

It spans the entire industry, from upstream mining and extraction to midstream refining, battery manufacturing, electric vehicle assembly, and battery energy storage systems linked to power-generation assets. Additionally, the database tracks major capital and maintenance projects across the supply chain.

Why is the battery supply chain important?

The battery supply chain is integral to this growth as it supports the production of lithium-ion batteries that power electric vehicles. Manufacturing of lithium-ion is mainly coming from the Asia Pacific region which currently leads with 87% of the world's lithium battery resources and continues to see significant growth.

What is the battery manufacturing & use market database?

IIR's Database for the Battery Manufacturing and Usage Market is a comprehensive resource covering Asset Owners, manufacturing plants, battery storage sites, and related transmission profiles.

How does the Department of state support a battery supply chain?

through the American Battery Materials Initiative and other forums. The Department of State is leading international engagement and coalition-building with likeminded nations through forums like the Minerals Security Partnership,¹¹⁴ deepening relationships and helping to mobilize investment to diversify and secure supply chains
