Inverter voltage adjustment knob

Overview

What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

How do you adjust voltage with a potentiometer?

To adjust the voltage with a potentiometer, you'll need to: Connect the potentiometer between the adjustment pin and ground pin on the voltage regulator and make sure it's properly adjusted by rotating the shaft. Turn the potentiometer slowly in one direction until you see that the output voltage has reached your desired limit.

How does a battery inverter work?

After the battery is charged, you want to keep the battery "full", despite loads. So the inverter targets a lower constant battery voltage, this is the float voltage. When the battery voltage dips below the float voltage, current flows back into the battery to keep the battery full. Most of it will actually flow to the load.

How do you adjust a voltage regulator?

ADJ is the part that you'll be adjusting when you set up your voltage regulator. It's important to note that it likely won't have any numerical indicators—instead, you'll adjust this using a screwdriver or rotary switch. OUT is the regulators' output terminal.

What is a float voltage in an inverter?

To keep the battery near to fully charged, you need a constant voltage target for the inverter's charger. That voltage is called the "float" voltage, for

historical lead-acid reasons. Perhaps you don't "need" it for chemical reasons as you might for lead-acid, but really it's the same situation, so why not call it the float voltage.

Why does my inverter discharge a lot during a power outing?

During a power outing there is no grid to go to so discharge will continue until you reach setting 29 where the inverter switches off. This level can be a bit above the BMS cut out as per the battery specs. OK, thanks. That seems clear but just to be sure.
