Inverter voltage upgrade

Overview

The following diagram shows a simple and very effective power output stage which can be integrated with any totem pole IC outputs such as IC 4047, IC TL494, IC SG3525, IC 4017 (clocked with IC555).

How do I increase the output voltage of my inverter?

Use an AC Voltage Booster One way to increase the output voltage of your inverter is to use an AC voltage booster. This device will amplify the voltage of the incoming AC, allowing you to get more power from your solar panels. They are relatively affordable and easy to install and can be a great way to get more out of your existing solar system.

How to upgrade a low power inverer circuit to a higher power?

The above explained ideas for upgrading a low power inverer circuit to a higher power version can be implemented to any desired level, simply by adding several MOSFETs in parallel. Adding MOSFETs in parallel is actually easier than adding BJT in parallel.

Can I upgrade my inverter?

If your existing inverter is already working near to its full capacity, for example 3kW-4kW of panels with a 3kW inverter, you have two choices: upgrade to a 5kW inverter and add an additional 2kW-3kW of panels, or your new and existing solar systems will operate side by side.

How does a power inverter work?

For the record, a power inverter converts ~ 12V dc--> ~120 AC (normally non-sinusoidal). to increase the power output, the amount of output current the device can source is increased, whereas its output voltage remains the same.

How many watts is a small inverter?

You'll find a plenty of small and medium sized inverters in the market ranging from 100 to 500 watts, the same may be seen posted in this blog. Upgrading or converting such small or medium power inverters into massive high power

inverter in the order of kvas may look quite a daunting and complex, but actually it's not.

Do I need to update my inverter firmware?

You have prepared the memory card for the firmware upgrade or downgrade. When upgrading the firmware, you replace the inverter firmware by a later version. Only update the firmware to a later version if you require the expanded functional scope of the newer version. The firmware version of your inverter is at least V4.5.
