

## SolarInvert Energy Solutions

# Investment in photovoltaic panel manufacturers in Southeast Asia

## Overview

---

Major Chinese photovoltaic firms such as Jinko Solar, Trina Solar, LONGi Green Energy, JA Solar, CSIQ, and ET Solar have established integrated capacities for wafers, cells, and modules in Southeast Asia. Why is PV module manufacturing under pressure in Southeast Asia?

Despite strong ambitions, PV module manufacturing in Southeast Asian is currently under pressure. Operational capacities have been significantly reduced or temporarily halted, primarily due to U.S. import tariffs. Once a strategic workaround for Chinese manufacturers aiming to access Western markets, Southeast Asia now faces growing constraints.

Where can you get solar power in Southeast Asia?

Thailand is easily the longest-established Southeast Asian market for electricity generated by photovoltaic (PV) modules, with its involvement in solar going back to the 1990s. In the beginning, the government provided a level of subsidy and made licenses available very easily, but there weren't many takers because the returns were so low.

Will solar panels boost the solar energy sector in Vietnam?

The solar panels were installed on the roof of Dong Anh C&F's factory in Dong Anh District, Hanoi, Vietnam, and they will generate over 1,000,000 KWh of electricity per year. Therefore, commissioning these projects is likely to boost the sector in Vietnam during the study period. The Southeast Asia Solar Energy Market is moderately fragmented.

Which countries will boost Southeast Asia into a major PV market?

The five major PV markets—Vietnam, Thailand, Malaysia, the Philippines, and Singapore—are set to boost Southeast Asia into a major PV market with strong policy push. Vietnam approved the long-discussed Direct Power Purchase Agreement (DPPA) on July 3, 2024, allowing electricity buyers to procure green energy via national or private grids.

Will PV demand grow in Southeast Asia in 2024?

InfoLink projects that PV demand in Southeast Asia will reach 4.5-7.4 GW in 2024, with long-term demand likely growing to 9.7-12.9 GW, suggesting that the Southeast Asian PV market will maintain steady growth in the coming years, becoming a key player in the global energy transition.

What is the Southeast Asia Solar supply chain map?

This edition of the Southeast Asia Solar Supply Chain Map provides a detailed snapshot of current realities and future ambitions, as the region navigates complex trade, investment, and production challenges.
