

## SolarInvert Energy Solutions

# Is home energy storage common in New Delhi

## Overview

---

Which energy storage technologies are dominating in India?

In energy storage projects, PHES and BES are dominating in India. The lead acid battery being mature technology has the largest share in the Indian market and is most widely used in residential, industrial and commercial sectors.

Why is energy storage important in India?

Energy storage may also lead to potential replacement/reduction of diesel generator sets for backup power in India which helps in saving fossil fuel, reduction in emissions and noise pollution. In the case of utilities energy storage can be used for better load management without resorting to load shedding.

Why is Delhi the only state to shut down thermal power plants?

Delhi is also the only state to shut down all its thermal power plants and shift its industry to clean fuels. According to an IEEFA report, Delhi has just 9% of renewables in the power mix, with a huge percentage of renewable energy potential still being untapped (86%).

How will Delhi use the energy budget for 2023-24?

Delhi must use the Rs33.48 billion (US\$407 million) allotted to the energy sector in its budget for 2023-24 to aggressively pursue solar power targets, promote sustainable practices in various sectors and participate more in green electricity markets.

Does Delhi need a green market?

Renewable energy had a key role in Delhi's ability to serve the peak demand. But far from resting on its laurels, the state needs to accelerate renewable energy deployment and buy more clean energy by participating in green market mechanisms.

When will India's electricity demand hit a new high?

With the mercury rising in India's capital, New Delhi, electricity demand is touching new heights. The state government expects peak demand to touch 8,000 megawatts (MW) by June or July 2023, beating last year's record high of 7,695MW by about 4%.
