Is outdoor power safe at home

Overview

Are outdoor electrical systems safe?

From outdoor lighting and security systems to pools, spas, and garden tools, we rely on electricity to enhance our time spent outdoors. However, outdoor electrical systems come with their own set of safety risks, especially when exposed to the elements.

Why are outdoor electrical systems important?

With the increasing popularity of outdoor living spaces, electrical systems outside the home are more important than ever. From outdoor lighting and security systems to pools, spas, and garden tools, we rely on electricity to enhance our time spent outdoors.

Do outdoor electrical systems need to be inspected?

For example, pool lights and pumps need to be regularly inspected to ensure they are properly grounded and operating safely. At Thomas Edison Electric, we specialize in outdoor electrical safety and can help ensure your home's outdoor electrical systems are up to code and safe to use.

Do you need a licensed electrician to install outdoor electrical systems?

A licensed electrician can help you install the appropriate weatherproof outlets and covers to ensure your outdoor electrical system is safe from the elements. Outdoor electrical safety isn't just about outlets and wiring; it also extends to how you use extension cords and power tools.

How do I protect my electrical equipment from water?

Keep electrical equipment well back from the water (at least three metres). Do routine electrical maintenance yearly to make sure the electrical components are in good condition. Follow the principle of "right cord, right place, and right use" when using extension cords outdoors.

Can you use a power bar indoors?

Using an indoor cord or power bar, even for a short time, could cause shock, electrocution or fire. It also violates the Ontario Electrical Safety Code. Use a heavy-duty extension cord for electric power tools. Always use grounded (three-pronged) cords. Never remove the grounding pin from the plug – it is there to protect you.
