

## SolarInvert Energy Solutions

# Lead-mercury flow battery

## Overview

---

Is soluble lead flow battery better than other chemistries?

Conclusions and future work The soluble lead flow battery offers some advantages over other chemistries due to the single active species,  $\text{Pb}^{2+}$ .

Why is soluble lead redox flow battery (slrfb) limited?

Development and demonstration of soluble lead redox flow battery (SLRFB) is hindered due to its limited cycle life caused by the formation of lead dendrites, oxygen evolution reaction (OER), and accumulation of  $\text{PbO}_2$  sludge. OER leads to an imbalanced deposition of Pb metal at anode and  $\text{PbO}_2$  at cathode.

Does flow rate affect soluble lead flow battery performance?

There is little work regarding the flow rate in the soluble lead flow battery. Understanding the relationship between flow rate and cell performance is important, as this could minimise the pump power whilst maintaining good electrochemical performance.

Is a lead acid battery based on an electrolyte with soluble lead (II)?

Hazza A, Pletcher D, Wills R (2005) A lead acid battery based on an electrolyte with soluble lead (II). Part IV. The influence of additives. J Power Sources 149:103 Pletcher D, Zhou H, Kear G, Low CJ, Walsh FC, Wills RG (2008) A lead acid battery based on an electrolyte with soluble lead (II). Part V. Studies of the lead negative electrode.

Which acid is best for soluble lead flow battery?

MSA is a well understood acid that has become very popular in electroplating applications. Because of this, its high conductivity, high metal salt solubility and overall safer nature, it is clear that MSA is the acid of choice for the soluble lead flow battery. 3.4. Electrolyte density and viscosity.

What is a novel flow battery?

A novel flow battery: a lead acid battery based on an electrolyte with soluble lead (II) Part IV. The influence of additives J. Collins, G. Kear, X. Li, C.T.J. Low, D. Pletcher, R. Tangirala, et al. A novel flow battery: a lead acid battery based on an electrolyte with soluble lead (II) Part VIII. The cycling of a 10 cm × 10 cm flow cell

## Lead-mercury flow battery
