

# Lithium battery pack can be partially replaced

## Overview

---

Should you disassemble a lithium-ion battery pack?

This is why it's a good idea to disassemble lithium-ion battery packs for its cells. In most other cases, just a single cell has failed. Remember, battery packs are made of many cells that are grouped in a specific way. So, if one cell dies, it will bring down the cells that it is immediately attached to.

Should a battery pack be replaced?

If a relatively new pack has only one defective cell and a replacement is located, exchanging the affected cell makes sense. With an aged battery, however, it's best to replace all cells. Mixing new with old causes a cell mismatch that has a short life. In a well-matched battery pack all cells have similar capacities.

Can a battery pack be reconfigurable for individual cell replacement?

An alternative strategy would be making the battery pack reconfigurable for individual cell replacement, so that only less healthy cells would be replaced with newer cells, instead of replacing the entire battery pack [ 17 ].

Can lithium ion batteries be reused?

The second scenario for reuse of lithium ion battery packs examines the problem of assembling a pack for less-demanding applications from a set of aged cells, which exhibit more variation in capacity and impedance than their new counterparts.

Can Li-ion batteries be replaced?

The concept of cell replacement in Li-ion battery packs is relatively new, and despite some recent efforts to investigate this concept, the feasibility, in terms of economics and design, of cell replacement has not been well-studied.

What does it mean if a lithium ion battery pack is split?

It generally means that the other cell groups are just fine. Lithium-ion battery packs are spot welded together. So it's no small feat to separate the cells. In fact, breaking down a lithium-ion battery pack is a rather involved process that takes care and patience. You have to be extremely careful when breaking down a lithium-ion battery pack.
