

## SolarInvert Energy Solutions

# Micro power station generator set

## Overview

---

What is MPMC hybrid power station?

MPMC Hybrid Power Station is a reliable resilient / prime energy solution mainly developed for independent power. For green living while ensuring stable off-grid power source, Hybrid Power Station integrates diesel generator set (gas generator set for optional), solar power, battery storage and hybrid solar inverter in one secure unit.

What is hybrid power station?

For green living while ensuring stable off-grid power source, Hybrid Power Station integrates diesel generator set (gas generator set for optional), solar power, battery storage and hybrid solar inverter in one secure unit. It helps customers realize solar self-consumption, rate arbitrage and more importantly, power independence.

What is a micro hydro power plant?

A Micro Hydro Power Plant is a small-scale electricity generation system that uses the flow of water to produce energy. It is ideal for remote areas, small communities, farms, or individual homes where large power plants are not available or practical. Micro hydro systems are a clean, renewable, and reliable way to generate electricity using [ . ].

How much electricity does a micro hydro system produce?

It typically generates up to 100 kilowatts (kW) of electricity. Systems that produce less than 5 kW are often used for single homes, while larger ones (up to 100 kW) can supply power to small villages or industries. Micro hydro systems are built near natural flowing water sources.

Why did MPMC showcase its Microgrid technology at the electric & power Indonesia exhibition?

On August 31, 2024, MPMC showcased its microgrid technology at the Electric

& Power Indonesia exhibition in Jakarta. Our innovative hybrid energy solutions received high praise from global attendees. At the Jakarta International Exhibition Center, MPMC's booth attracted significant attention.

How much does a micro hydro system cost?

The cost of a micro hydro system varies depending on site conditions, size, and technology. Small systems (1–5 kW) may cost \$5,000 to \$20,000, while larger systems (up to 100 kW) can range from \$30,000 to over \$100,000. In general, the average cost is around \$1,000 to \$5,000 per kilowatt of installed capacity.
