Mobile Base Station Battery Purchase

Overview

What is a mobile phone base station?

A mobile phone base station is a telecommunications infrastructure used to send and receive RF signals from mobile phones. The frequencies used typically range from 900 MHz to 2.45 GHz, with powers varying from 1 W for indoor antennas to 40 W for those at high elevations.

What is a telecom battery backup system?

A telecom battery backup system is a comprehensive portfolio of energy storage batteries used as backup power for base stations to ensure a reliable and stable power supply. As we are entering the 5G era and the energy consumption of 5G base stations has been substantially increasing, this system is playing a more significant role than ever before.

Should telecommunication operators invest in a telecom battery backup system?

Investing in a telecom battery backup system is always one of the priorities for telecommunication operators in the 5G era. Sunwoda 48V telecom batteries have a capacity covering 50Ah-150Ah, which can easily meet the power backup needs of macro and micro base stations.
