

## SolarInvert Energy Solutions

# Moldova household energy storage battery prices

## Overview

---

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How has battery storage changed the world?

Wider deployment and the commercialisation of new battery storage technologies has led to rapid cost reductions, notably for lithium-ion batteries, but also for high-temperature sodium-sulphur (“NAS”) and so-called “flow” batteries. In Germany, for example, small-scale household Li-ion battery costs have fallen by over 60% since late 2014.

How can electricity storage cost-of-service be reduced?

In the meantime, lower installed costs, longer lifetimes, increased numbers of cycles and improved performance will further drive down the cost of stored electricity services. IRENA has developed a spreadsheet-based “Electricity Storage Cost-of-Service Tool” available for download.
