New solar system installation in Senegal

Overview

Africa REN has commissioned a 16 MW solar plant with 10 MW/20 MWh of battery storage in northern Senegal, billed as the first grid-connected solar-plus-storage facility in West Africa. Does Senegal have a solar power plant?

However, under the government-backed World Bank Scaling Solar program, 60 MW was added to Senegal's domestic power generation last year alone through solar. Last month, H.E. President Macky Sall inaugurated the 23 MW peak Diass solar power plant, supported by German Chancellor, H.E. Olaf Scholz.

Will two solar plants be built in Senegal's southern Casamance region?

DAKAR, Nov 13 (Reuters) - Two solar plants with a combined 60 megawatts (MW) capacity and battery storage will be built in Senegal's southern Casamance region to electrify rural areas, Africa-based project developer Axian Energy said on Wednesday.

How many jobs will the new solar power plants create in Senegal?

The addition of the solar power plants form part of the World Bank Group's Scaling Solar program and are funded by the International Finance Corporation (IFC), European Investment Bank and Proparco. The project estimates that more than 400 jobs in the towns benefit from the existence of the new solar power plants in Senegal.

How much electricity does Senegal have?

As it stands, 70.4% of the Senegalese population has access to electricity, of which less than a third is generated from domestic sources – total installed capacity currently sits at 1,555 MW. However, under the government-backed World Bank Scaling Solar program, 60 MW was added to Senegal's domestic power generation last year alone through solar.

What is Scaling Solar in Senegal?

These plants are part of the Scaling Solar initiative in Senegal, jointly led by the Senegalese authorities and the International Finance Corporation (IFC), which aims to promote investment in solar energy. These are the first electricity generation projects by private operators to be tendered in Senegal.

When will Kael & Kahone solar plants be available in Senegal?

Meanwhile, the Kael and Kahone solar plants came online in May 2021, developed by Engie and Meridiam following competitive tendering by Senegal's Energy Regulatory Commission, financed by the International Finance Corporation, European Investment Bank, Proparco and Senegalese sovereign wealth fund, FONSI.
