Non-standard container generator set

Overview

What is container type diesel generator set?

Container type Diesel Generator Set Jet power supply container type generator set is design in accordance with ISO/TC104 standard size, rational construction, to make sure the generator set will not be damaged due to under high pressure in transport, and is suitable for ship transportation.

What are the different types of container generators?

We can supply the 20' container, 40' container, and widen or heighten container type. They are divided into the normal type and silent type. This series generator set can be easily moved to the desired location, can run under the most demanding working conditions.

What is jet power supply container type generator set?

Jet power supply container type generator set is design in accordance with ISO/TC104 standard size, rational construction, to make sure the generator set will not be damaged due to under high pressure in transport, and is suitable for ship transportation. We can supply the 20' container, 40' container, and widen or heighten container type.

What are mg containerized gensets?

MG containerized type gensets use advanced sound-absorbing materials, scientific and unique design in airflow and noise control. The container is with CSC certification, in line with international container security convention, ensures shipping directly as a standard container, and greatly saves the cost of transportation.

What is a genset container?

The definition of a genset container is an engine that drives the generator, which provides the power used to run other equipment. Depending on the application, the genset may run construction equipment, appliances, cooling

systems or other devices. Each genset consists of two main components, the generator – or alternator – and the engine.

What size genset container do I Need?

The container is fixed with an inspection door at each side, also equipped with a ladder outside for easy inspection and maintenance. -According to genset dimension, below 1000 KVA, it will use ISO 20'ft GP or HQ container and 40' HQ container for above 1250KVA.
